

Refill Instructions

HP C9364 #94;

1. Put the cartridge on some paper towels in an area where you can tolerate a spill.

2. Peel off the top label.
3. Fill the syringe with 20 ml. of color ink.
4. Very S-L-O-W-L-Y inject ink into any hole (they all go to the same sponge, HP just used the same color mold for the black ink cartridges).
5. When finished, replace the top label or leave it off (it will

make no difference in the printing).

6. Replace the cartridge and run 1 - 3 cleaning cycles as per printer instructions.
If necessary leave cartridge in printer for up to 8 hours.

The cartridge will print just like a new one. Even though the cartridge prints good, the ink level gauge will not read full after a refill.

7. Reinsert the cartridge and run 1 - 3 test pages as per printer instructions. If necessary leave cartridge in printer for up to 24 hours to allow ink to flow to the print head.

Note: This time is greatly reduced if the cartridge is refilled before it is completely empty.
